

EDITORIAL

Dear Colleagues,

We are pleased to present the first issue of 2026, following a landmark achievement for our journal in 2025: acceptance into Web of Science. This milestone reflects the scientific rigor of our authors, the diligence of our reviewers, and our shared commitment to high-quality research in clinical biochemistry and laboratory medicine.

The articles in this issue represent the breadth of our field—from prognostic biomarkers in non-ST elevation myocardial infarction and emerging endocrine mediators in Type 2 diabetes, to oxidative stress markers in brucellosis and amino acid profiling in chronic renal failure. Genetic considerations in polycythemia, advances in total laboratory automation, and the evolving role of digital platforms in clinical biochemistry education further highlight the dynamic transformation of laboratory medicine.

In addition, our review on Alzheimer's disease emphasizes the critical integration of biological biomarkers into diagnostic practice, reinforcing the translational mission of our discipline.

As we move forward with increased international visibility, we remain committed to methodological excellence, clinical relevance, and interdisciplinary collaboration.

We thank our contributors and readers for their continued support.

Sincerely,

Prof. Dildar Konukoglu, MD.

Editor-in-Chief
